PROFESSIONAL SUMMARY

Third-year Computer Science student at University of Mindanao, specializing in Cybersecurity. Currently building hands-on experience in full-stack web development and has worked on personal and academic projects spanning Python, web development, and algorithm implementation. Seeking work opportunity to grow as a developer and apply foundational skills in a real-world environment.

EDUCATION

University of Mindanao
Bachelor of Science in Computer Science
3rd Year | Specializing in Cybersecurity

Davao City

August 2023 - June 2027

PROJECTS

- Jan2026 – August 2026
- Thesis: A Random Forest-Based Approach for Detecting Business Email Compromise in Enterprise Email Systems
University Of Mindanao
- Developing a machine learning-based approach to detect BEC attacks within organizational email systems. Specifically, the research utilizes the Random Forest algorithm, a supervised learning method known for its accuracy and ability to handle complex datasets. The model is trained on features extracted from email data, such as sender behavior, email content patterns, header information, and linguistic cues.
- Real Estate Pricing Prediction
- Utilizing a pricing prediction for real estate using Gradient Boosting, while comparing with other models.
- Inventory Management Simulator
- Developing an inventory simulation to analyze different stocking strategies and determine how to minimize costs while maintaining enough inventory to meet customer demand. The goal was to avoid stockouts, which can lead to lost sales and dissatisfied customers
- Rmwoodworks Inventory Management (ERP)Jan 2026 – Mar 2026
- A comprehensive Laravel-based web application designed to manage the complete lifecycle of wood materials and products. It streamlines procurement, inventory tracking, sales operations, and manufacturing workflows for wood-based businesses.
- Sorting Algorithms GUI
- Developing a sorting algorithm because handling large datasets requires efficient organization. By sorting the data, I was able to improve search performance, reduce processing time, and make the system more scalable.
- Audio LibraryNov 2024 – Dec 2024
- Audio Library: A platform where users can browse, purchase, and stream music from artists. It allows users to create and manage playlists, add tracks to their collection, and explore a personal music library.

SKILLS

Languages	Python, C++, Java, HTML, CSS, JavaScript, TypeScript, Solidity, SQL
Tools	Git/GitHub, Visual Studio Code, Microsoft Office, Google Workspace, A.I. (Claude, Perplexity, Gemini, ChatGPT, Codex), Trello, Notion
Libraries/Frameworks	Django, ReactJS, NodeJS, Laravel, NextJS
Databases	MySQL, PostgreSQL
Relevant Competencies	RESTful APIs, Data Structures and Algorithms, Web and Software Development, Enterprise Resource Planning Systems, Information Management
